SELECTING CUTTER FOR MILLING SPIRAL GEARS

HOW TO USE THE TABLE

Multiply the actual number of teeth in the spiral gear to be cut by the factor  $K$  as given in the table opposite the angle of spiral. ( $K = 1 + \cos^2 \alpha$ ). The product gives the number of teeth for which to select the cutter.

Example: Angle of spiral =  $30^\circ$ ; number of teeth in spiral gear = 18. Then:  $18 \times 1.540 = 28$ , approximately. Hence, use spur gear cutter for 28 teeth, or spur gear cutter No. 4.

Angle of Spiral, $\alpha$	K	Angle of Spiral, $\alpha$	K	Angle of Spiral, $\alpha$	K	Angle of Spiral, $\alpha$	K	Angle of Spiral, $\alpha$	K
